

Low/Medium/High/Ultra-high Thrust Rod Type
Servo Press Models with Load Cell

High/Ultra-high Payload Rod Type
Conveyor Position Models without Load Cell

RCS3/2 RA□R-LCT

RCS3/2 RA13/15/20R

All Models Equipped
with a Battery-less Absolute Encoder as Standard
High Payload Rod Types also Now Available

Rod type actuator that can be used in simple pressing. As it is capable of high precision position control, it can easily set the hard push force adjustment and position control that have been difficult with the hydraulic pressure.

1

Servo Press Specification Available

The servo press specification actuator is equipped with a load cell to allow for the force control.

What Is Push-motion Operation?

Similar to an air cylinder, push-motion operation is the function of keeping the rod and slider pushed to the work, etc. Servo press provides superior stop stability during pressing, which makes them optimal for push-motion operation. Also, servo press can be used in a wide variety of applications because it can be used in work operations that require strong push force, such as press fitting and caulking operation.

What Is Force Control?

A function that can perform high precision push control output using the feedback data from the dedicated load cell installed in the actuator.

What Is the Servo Press Specification?

The specification which can perform various push-motion operations by using the press program. For details, please refer to P. 3.

<Application Examples>

Press-fitting a pin

Riveting work

- Accurate push force can be managed
- Detailed push force setting can be set for each product

2

High Precision Load Control

Equipped with a dedicated load cell at the rod tip to detect the load applied to the pressed object. This provides the high precision load control with the loading repeatability of $\pm 0.5\%$ F.S. (full-scale).

Points

F.S.: Full Scale
Maximum measurable value

3 Extensive Lineup

The servo press specification can be selected from 8 model types with the max. push force of 200N~50000N.

[Servo press specification models]

	RCS3-RA4R	RCS3-RA6R	RCS3-RA7R	RCS3-RA8R
	Low Thrust 20kg Type	Low Thrust 60kg Type	Medium Thrust 120kg Type	Medium Thrust 200kg Type
Stroke (mm)	110~410	115~415	120~520	100~500
Motor (W)	30	60	100	200
Lead (mm)	2.5	1.5	2	2.5
Max. push force (N)*	200	600	1200	2000
Max. payload (kg)	Horizontal 3 Vertical 3	Horizontal 10 Vertical 10	Horizontal 10 Vertical 10	Horizontal 10 Vertical 10
Max speed (mm/s)	125	75	100	125

	RCS3-RA10R High Thrust 0.6t Type	RCS2-RA13R High Thrust 1t Type High Thrust 2t Type	RCS3-RA15R Ultra-high Thrust 3t Type	RCS3-RA20R Ultra-high Thrust 5t Type
Stroke (mm)	100~500	50~200	100~500	100~500
Motor (W)	400	750	3300	3000
Lead (mm)	2.5	2.5 1.25	3.6	4
Max. push force (N)*	6000	9800 19600	30000	50000
Max. payload (kg)	Horizontal 15 Vertical 15	Horizontal 15 15 Vertical 15 15	Horizontal 15 Vertical 220	Horizontal 15 Vertical 220
Max speed (mm/s)	125	125 62	240	220

* Max. push force can be achieved only during push mode with 1~10mm/s speed range.

4 Capable of Pushing at Maximum Push Force for Long Periods

RCS3-RA15R/RA20R model types of servo press specification achieve the push time of 9s/10s at the maximum push force (30000N/50000N). They can be used for applications where the time until a predetermined push force is reached is indefinite such as compression molding of powders, applications where the push force is maintained from the pressurized state until cooling such as hot plate welding, and applications where the push force is maintained for a predetermined period such as the strain relief of workpiece.

5 Equipped with a Battery-less Absolute Encoder as Standard

Equipped with a Battery-less Absolute Encoder as standard. There is no need to replace batteries, reducing the maintenance processes.

Advantages of Battery-less Absolute

- The machine will no longer stop due to battery error (voltage drop, etc.).
- There is no need to purchase replacement batteries.
- There is no need to replace batteries, saving time and trouble such as absolute reset.

Battery-less Absolute Encoder

No Battery,
No Maintenance, No Homing,
No Going Back to Incremental.

6 High & Ultra-high Payload Rod Type is Also Available

High/ultra-high payload rod type (conveyor position models w/o load cell) can be selected for transport application.

[Conveyor position models]

	RCS2-RA13R High Payl. 1t Type High Payl. 2t Type	RCS3-RA15R Ultra-high Payload 1.5t Type	RCS3-RA20R Ultra-high Payload 2t Type
Stroke (mm)	50~200	100~500	100~500
Motor (W)	750	3300	3000
Lead (mm)	2.5 1.25	7.2	10
Max. push force (N)*	9800 19600	15000	20000
Max. payload (kg)	Horizontal 400 500 Vertical 200 300	Horizontal 700 Vertical 400	Horizontal 1000 Vertical 600
Max speed (mm/s)	125 62	400	400

* Max. push force can be achieved only within 5~10mm/s speed range.

Dedicated Software: Press Program

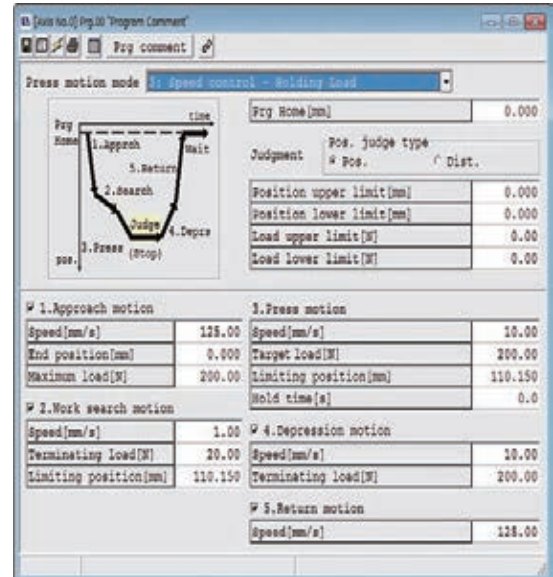

With this Press Program, one of two control methods, "Speed Control" or "Force Control", can be selected. In addition, one of four stop conditions, "Position", "Distance", "Load", or "Incremental Load", can be selected as the method for stopping. By utilizing a total of eight types of press methods, it is possible to handle a variety of press motion.

Explanation of Operation

- | | |
|--|---|
| <p>(1) Approach (can be omitted)
Performs high-speed transfer until directly before contacting work</p> <p>(2) Search (can be omitted)
Detects work contact</p> <p>(3) Press (necessary)
Accelerates, then performs pressing work</p> | <p>(4) Stop (can be omitted when set to 0)
Stops at a fixed position or continues to push</p> <p>(5) Depress (can be omitted)
Slowly separates from the work</p> <p>(6) Return (can be omitted)
Returns to the program home position at high speed</p> |
|--|---|

Program Screen

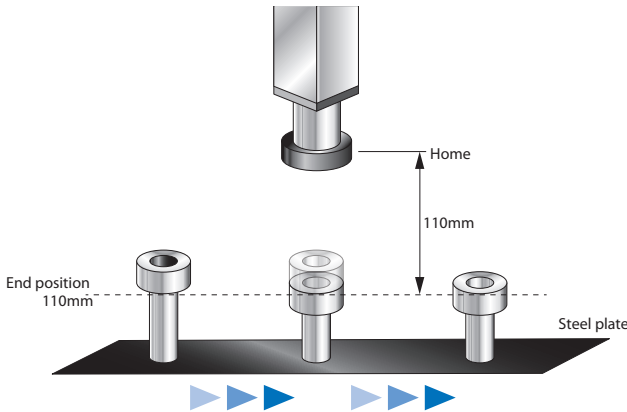

Example of press fitting a machine part into a washer

Mode		Internal control	Stop state	Applications
Speed control After arriving at the target position, stops while maintaining the position at the time of arrival.	Position stop	Positioning	Positioning stop	Press fitting, riveting, squeezing, etc. (primarily metalworking)
	Distance stop			
	Load stop			
	Incremental load stop			
Force control After arriving at the target position, it stops while maintaining the force at the time of arrival.	Position stop	Push	Continuing push-motion operation	Compressive molding, etc. of powders
	Distance stop			
	Load stop			
	Incremental load stop			

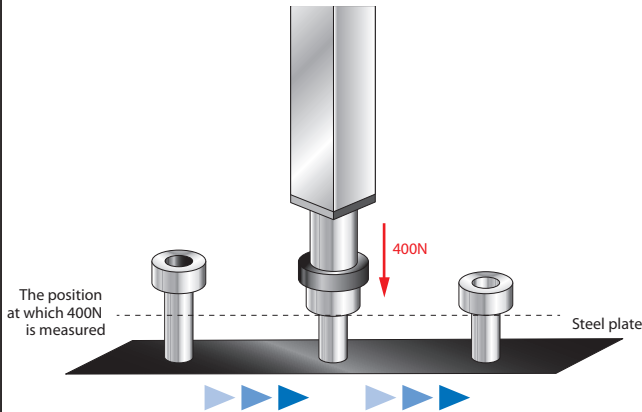

Position stop

Performs pressing work to the specified position.

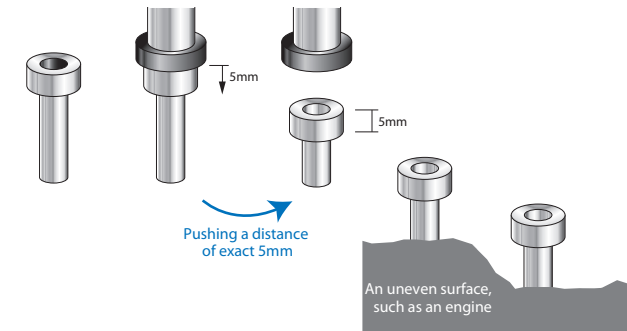

Load stop

Performs pressing work that stops at the position at which the specified load was detected.

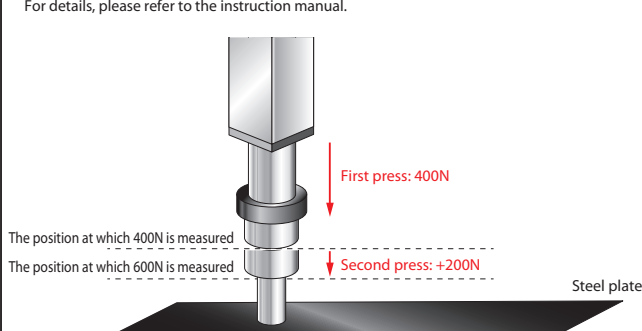

Distance stop

Performs pressing work by moving a specified distance and then stopping. This is optimal in situations in which the press start position changes.

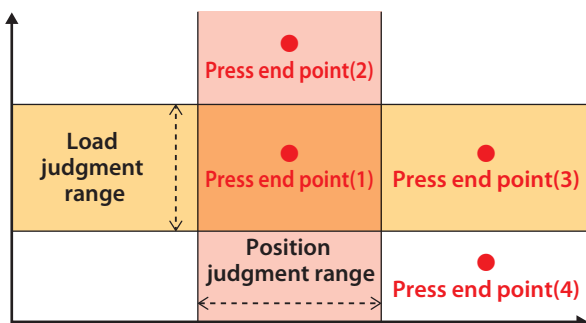

Incremental load stop

Performs pressing work that stops at the position at which the load (sum of the press start load and the specified incremental load) has been detected.
* It is possible to perform the operation by linking two programs together. For details, please refer to the instruction manual.

Explanation of Operation

From the end of press to the end of the stop state, it is possible to perform position judgment and load judgment.

<Judgment Results>

No.	Position	Load
①	OK	OK
②	OK	NG
③	NG	OK
④	NG	NG

- When a result of NG ("Not Good") has been detected for either the position or load, the program ends abnormally.
- It is also possible to set position only, load only, or neither.

* Depending on the model,
there may be some limitations
to using the vertical mount
position. Please contact IAI for
more information.

Correlation Diagram of Push Force and Current Limit Value

Caution:

- The correlation between push force and push command value are strictly for reference purposes. Actual numbers may vary slightly.
- The push command value should be 12% or more because the push force will be unstable when the push command value is low.

POINT

Selection
Notes

(1) There are no limitations on the continuous push time. The duty ratio is also 100% and continuous operation is possible.

(2) Customer's tooling is to be mounted on the load cell itself. In case any radial or moment load is applied to the load cell, please consider adding the external guides, etc. to offset those side loads.

(3) Please install a support block when front mounting or back mounting a horizontally mounted actuator that is 150st or more. (Refer to page 34 "Notes When Installing")

(4) Servo Press with load cell should not be used for pulling motion. It will damage the load cell.

type, specify the mount
direction (ML/MR).

* Does not include a controller.

* Please contact IAI for more information about the model specification items.

* Body width does not include the width of the side-mounted motor.

* Depending on the model, there may be some limitations to using the vertical mount position. Please contact IAI for more information.

Correlation Diagram of Push Force and Current Limit Value

Caution:

- The correlation between push force and push command value are strictly for reference purposes. Actual numbers may vary slightly.
- The push command value should be 14% or more because the push force will be unstable when the push command value is low.

POINT Selection Notes

- (1) For push-motion operation, check the allowable time period of continuous push-motion set with a different thrust force. Also, please check that the allowable continuous operational thrust force for the actual push cycle is less than the allowable continuous operational thrust force. (Even if there is no push motion) Please refer to P.27 for more information.
- (2) Customer's tooling is to be mounted on the load cell itself. In case any radial or moment load is applied to the load cell, please consider adding the external guides, etc. to offset those side loads.
- (3) Please install a support block when front mounting or back mounting a horizontally mounted actuator that is 150st or more. (Refer to page 34 "Notes When Installing")
- (4) Servo Press with load cell should not be used for pulling motion. It will damage the load cell.

Actuator Specifications

Lead and Payload

Model Number	Motor wattage (W)	Lead (mm)	Max. speed (mm/s)	Max. acceleration (G)	Max. payload (kg)	Rated thrust (N)	Max. push force (N)

* Body width does not include the width of the side-mounted motor.

* Depending on the model, there may be some limitations to using the vertical mount position. Please contact IAI for more information.

Correlation Diagram of Push Force and Current Limit Value

Caution:

- The correlation between push force and current limit value is strictly for reference purposes. Actual numbers may vary slightly.
- The push force will be unstable when the current limit value is low. Use at 20% or more for lead 1.25 and 40% or more for lead 2.5.

- POINT Selection Notes**
- (1) For push-motion operation, check the allowable time period of continuous push-motion set with a different thrust force. Also, please check that the allowable continuous operational thrust force for the actual push cycle is less than the allowable continuous operational thrust force and that the duty cycle is 50% or less. Please refer to the Selection Guidelines (P.28) for more information.
 - (2) The value of payload is when operating at an acceleration of 0.02G for lead 2.5 and 0.01G for lead 1.25. The value listed above is the upper limit of acceleration.
 - (3) Customer's tooling is to be mounted on the load cell itself. In case any radial or moment load is applied to the load cell, please consider adding the external guides, etc. to offset those side loads. The value of the horizontal payload assumes that there is an external guide and that the rod is not subjected to external force other than in the moving direction.
 - (4) For the brake option, a brake box (see P.16) is required in addition to the main unit and controller.
 - (5) Servo Press with load cell should not be used for pulling motion. It will damage the load cell.

Actuator Specifications

Lead and Payload

Model Number	Motor wattage (W)	Lead (mm)	Max. acceleration (G)	Max. payload (kg)	Rated thrust (N)	Max. push force (N)	Stroke (mm)

Options

Name	Option Code	Reference Page
Brake (With brake box)	B	See P.35
Brake (Without brake box) (Note 2)	BN	See P.35
Flange (Front) (Note 1)	FL	See P.36
Foot bracket (*1) (Note 3)	FT	See P.37
With load cell (with cable track for wiring) (*2) (Note 1)	LCT	See P.37
With load cell (without cable track for wiring) (*2)	LCN	See P.37
Motor top side-mounted	MT1/MT2/MT3	See P.37
Motor right side-mounted (Note 3)	MR1/MR2	See P.37
Motor left side-mounted (Note 3)	ML1/ML3	See P.37

(*1) Refer to P. 37 for the number of brackets included.

(*2) Please make sure to select one of these for the load cell option (LCT/LCN) in the box of Model Specification Items.

(Note 1) Load cell option (with cable track for wiring) "LCT" and flange option "FL" cannot be selected together.

(Note 2) When selecting the brake option (without brake box) "BN" and using it as the second axis of the brake box, a cable must be separately purchased. Please refer to P.40 for more information.

(Note 3) Option "MR1/MR2/ML1/ML3" and option "FT" cannot be selected together.

Dimensions

CAD drawings can be downloaded from our website.
www.robocylinder.de

- *1. Connect the motor-encoder cables. Please contact IAI for more details on the cable.
- *2. While the rod is returning to its home position, please be careful of interference from surrounding objects, as it will travel until it reaches the mechanical end.
M.E: Mechanical end S.E: Stroke end
- *3. The direction of width across flats varies depending on the product. Flats cannot be used for vertical or horizontal reference planes.

Notes
The specification with brake (option model name "-B") always comes with a brake box.
To purchase only the actuator body with brake, select the option model name "-BN".

Side-mounted motor direction / Cable exit position (Option)

Notes

Be sure to select a symbol in the model number for the side-mounted motor direction and cable exit position.

Option Code	MT1	MT2	MT3	MR1	ML1	MR2	ML3
Side-mounted motor direction	Top (standard)	Top	Top	Right side	Left side	Right side	Left side
Cable exit position	Top (standard)	Right side	Left side	Top	Top	Right side	Left side

Applicable Controllers

The RCS2 series actuators can be operated by the controllers indicated below. Please select the type depending on your intended use.

Name	External view	Max. number of connectable axes	Power supply voltage	Control method				Network * Option	Maximum number of positioning points	Reference page
				Positioner	Pulse train	Program	Press program

* Body width does not include the width of the side-mounted motor.

* Depending on the model, there may be some limitations to using the vertical mount position. Please contact IAI for more information.

Correlation Diagram of Push Force and Current Limit Value

Caution:

- The correlation between push force and push command value are strictly for reference purposes. Actual numbers may vary slightly.
- The push command value should be 34% or more because the push force will be unstable when the push command value is low.

- (1) For push-motion operation, check the allowable time period of continuous push-motion set with a different thrust force. Also, please check that the allowable continuous operational thrust force for the actual push cycle is less than the allowable continuous operational thrust force. (Even if there is no push motion) Please refer to P.28 for more information.
- (2) Customer's tooling is to be mounted on the load cell itself. In case any radial or moment load is applied to the load cell, please consider adding the external guides, etc. to offset those side loads.
- (3) Please install a support block when front mounting a horizontally mounted actuator. (Refer to page 34 "Notes When Installing")
- (4) Servo Press with load cell should not be used for pulling motion. It will damage the load cell.
- (5) The maximum payload for vertical mounting is 220kg when using the M5 tapped mounting hole at the tip of the load cell. When using the M8 tapped mounting hole on the side of the load cell tip and fixing with a setscrew, the payload should be 15 kg or less. Use either the M8 or M5 tapped mounting hole but not both.

Correlation Diagram of Push Force and Current Limit Value

Caution:

- The correlation between push force and current limit value is strictly for reference purposes. Actual numbers may vary slightly.
- The current limit value should be 20% or more because the push force will be unstable when the current limit value is low.
- The travel speed during push-motion operation is fixed at 10mm/s. Please note that the graph shows push-motion at 10mm/s, and the push force will decrease as the speed changes.
- Depending on the operating conditions, the push force may decrease due to the temperature rise of the motor

- (1) For push-motion operation, check the allowable time period of continuous push-motion set with a different thrust force. Also, please check that the allowable continuous operational thrust force for the actual push cycle is less than the allowable continuous operational thrust force and that the duty cycle is 50% or less. Please refer to the Selection Guidelines (P.28) for more information.
- (2) The value of payload is when operating at an acceleration of 0.02G for lead 2.5 and 0.01G for lead 1.25. The value listed above is the upper limit of acceleration.
- (3) Estimated allowable duty varies depending on operating conditions (payload, acceleration/deceleration, etc.). Please refer to P.31 for more information.
- (4) The value of the horizontal payload assumes that there is an external guide and that the rod is not subjected to external force other than in the moving direction.
- (5) Loads can be applied to the rod tip. Please refer to P.33 for more information.
- (6) For the brake option, a brake box (see P.22) is required in addition to the main unit and controller.

Actuator Specifications

Lead and Payload

Model Number	Motor wattage (W)	Lead (mm)	Max. acceleration (G)	Max. payload (kg)	Rated thrust (N)	Max. push force (N)	Stroke (mm)
RCS2-RA13R-WA-750-2.5-①-T2-②-③	750	2.5	0.02	400	5106	9800	50~200 (Every 50mm)
RCS2-RA13R-WA-750-1.25-①-T2-②-③	750	1.25	0.01	500	10211	19600	50~200 (Every 50mm)

Legend: ① Stroke ② Cable Length ③ Option
* Max. horizontal payload means max. weight on the customer's external guide.
** Max. push force can be achieved only within 5~10mm/s speed range.

Stroke and Max Speed

Lead (mm)	Stroke (mm)	50	100	150	200
2.5		85	120	125	
1.25			62		

(Unit: mm/s)

Cable Length

Type	Cable Code
Standard	P(1m) S(3m) M(5m)
Specified length (Standard cable)	X06(6m) ~X10(10m) X11(11m)~X15(15m) X16(16m)~X20(20m)
Robot cable	R01(1m) ~R03(3m) R04(4m) ~R05(5m) R06(6m) ~R10(10m) R11(11m)~R15(15m) R16(16m)~R20(20m)

* Please contact IAI for maintenance cables.

Options

Name	Option Code	Reference Page
Brake (With brake box)	B	See P.35
Brake (Without brake box) (Note 1)	BN	See P.35
Flange	FL	See P.36
Foot Bracket (Note 2)	FT	See P.37
Motor top side-mounted	MT1/MT2/MT3	See P.37
Motor right side-mounted (Note 2)	MR1/MR2	See P.37
Motor left side-mounted (Note 2)	ML1/ML3	See P.37

(Note 1) When selecting the brake option (without brake box) "BN" and using it as the second axis of the brake box, a cable must be separately purchased.
Please refer to P.40 for more information.

(Note 2) Option "MR1/MR2/ML1/ML3" and option "FT" cannot be selected together.

Operating Conditions

RCS3/RCS2 Series Servo press specification models (with load cell)

When using the actuator, the following three conditions must be satisfied.

Condition 1. The push time must be **the determined time or less**

Condition 2. The continuous operational thrust force of a single cycle must be **the allowable continuous operational thrust force or less**

Condition 3. In a single cycle, **push-motion operation must occur only once**

Selection method

Condition 1. Push time

The maximum push time of each push command value is determined in the tables below. When using the actuator, please make sure that the push time is the time indicated in the tables below or less.

Please be aware that using the actuator beyond the time indicated in the tables below may cause the actuator to malfunction.

Note that there are no limitations on the continuous push time for RA4R.

Operating Conditions

RCS3/RCS2 Series Servo press specification models (with load cell)

Condition 2. Continuous operational thrust force

Please consider that the load and duty cycle of a single continuous operational thrust force F_t must be smaller than the allowable continuous operational thrust force of the actuator. Also, **push-motion operation is performed only once** during a single cycle.

If the operation patterns on the left are rewritten so that thrust becomes the vertical axis

t : Operation time per cycle (s)
 t_{1a} : Acceleration time 1
 t_{1f} : Constant rate of traverse time 1
 t_{1d} : Deceleration time 1
 t_o : Push-motion operation time
 t_{2a} : Acceleration time 2
 t_{2f} : Constant rate of traverse time 2
 t_{2d} : Deceleration time 2
 t_w : Wait time

F_{1a} : Thrust necessary for acceleration 1
 F_{1f} : Thrust necessary for constant traverse 1
 F_{1d} : Thrust necessary for deceleration 1
 F_o : Thrust necessary for push-motion operation
 F_{2a} : Thrust necessary for acceleration 2
 F_{2f} : Thrust necessary for constant traverse 2
 F_{2d} : Thrust necessary for deceleration 2
 F_w : Thrust necessary for waiting

The continuous operational thrust force F_t of a single cycle is calculated with the following formula.

$$F_t = \sqrt{\frac{F_{1a}^2 \times t_{1a} + F_{1f}^2 \times t_{1f} + F_{1d}^2 \times t_{1d} + F_o^2 \times t_o + F_{2a}^2 \times t_{2a} + F_{2f}^2 \times t_{2f} + F_{2d}^2 \times t_{2d} + F_w^2 \times t_w}{t}}$$

● $F_{1a}/F_{2a}/F_{1d}/F_{2d}$ vary according to the direction of operation, so please calculate them with the formulas shown below.

In the case of horizontal use (acceleration/deceleration)

Horizontal use For constant traverse

Horizontal use In the wait state

Vertical use In the case of acceleration during descent

Vertical use In the case of constant traverse during descent

Vertical use In the case of deceleration during descent

Vertical use In the case of acceleration during ascent

Vertical use In the case of constant traverse during ascent

Vertical use In the case of deceleration during ascent

Vertical use In the wait state

$$F_{1a} = F_{1d} = F_{2a} = F_{2d} = (M+m) \times d + F_s$$

$$F_{1f} = F_{2f} = f + F_s$$

$$F_w = 0$$

$$F_{1a} = (M+m) \times 9.8 - (M+m) \times d + F_s$$

$$F_{1f} = (M+m) \times 9.8 + \alpha (*1) + F_s$$

$$F_{1d} = (M+m) \times 9.8 + (M+m) \times d + F_s$$

$$F_{2a} = (M+m) \times 9.8 + (M+m) \times d + F_s$$

$$F_{2f} = (M+m) \times 9.8 + \alpha (*1) + F_s$$

$$F_{2d} = (M+m) \times 9.8 - (M+m) \times d + F_s$$

$$F_w = (M+m) \times 9.8$$

M : Weight of moving part (kg)

m : Weight of load (kg)

d : Directive acceleration/deceleration setting (m/s²)

α : Thrust taking into account

the driving resistance of the external guide

f : Driving resistance with an external guide or

similar component installed (N)

F_s : Calculate the thrust for each speed from

the table below for RA15R and 20R only

*1 When an external guide or similar component is installed, it is necessary to take into account the driving resistance f .

Actuator
Mass of moving part:
RA6R: 2.5kg
RA7R: 3.5kg
RA8R: 4kg
RA10R: 5kg
RA13R: 9kg
RA15R: 10kg
RA20R: 18kg

RCS3-RA15R		RCS3-RA20R	
Speed [mm/s]	F_s [N]	Speed [mm/s]	F_s [N]

		101~110	13125
		111~120	15000
		121~130	16875
		131~140	18750
		141~150	20625
		151~160	22500
		161~170	24375
		171~180	26250
		181~220	27500

- $t_{\square a}$ is the acceleration time, but the calculation methods of a ① trapezoid pattern and a ② triangle pattern are different.

The difference between a trapezoid pattern and a triangle pattern can be determined by whether the arrival speed of operation of the traverse distance at the set acceleration is larger or smaller than the set speed.

$$\text{Arrival speed (Vmax)} = \sqrt{\text{traverse distance (m)} \times \text{set acceleration (m/s}^2\text{)}}$$

Set speed < arrival speed → ① trapezoid pattern

Set speed > arrival speed → ② triangle pattern

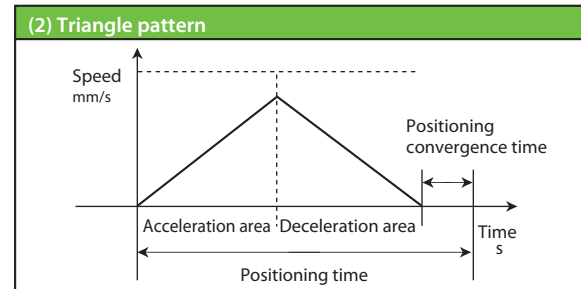

- ① In the case of a trapezoid pattern

$$t_{\square a} = V_s/a \quad V_s: \text{Set speed (m/s)} \quad a: \text{Directive acceleration (m/s}^2\text{)}$$

- ② In the case of a triangle pattern

$$t_{\square a} = V_t/a \quad V_t: \text{Arrival speed (m/s)} \quad a: \text{Directive acceleration (m/s}^2\text{)}$$

- $t_{\square f}$ is the constant traverse speed. Please calculate this to calculate the constant traverse distance.

$$t_{\square f} = L_c/V \quad L_c: \text{Constant traverse distance (m)} \quad V: \text{Directive speed (m/s)}$$

* Constant traverse distance = traverse distance - acceleration distance - deceleration distance; acceleration distance (deceleration distance) = $V^2/2a$

- $t_{\square d}$ is the deceleration time, but if the magnitude of acceleration and deceleration are the same, then it is the same as the acceleration time.

$$t_{\square d} = V/a \quad V: \text{The set speed (trapezoid pattern) or arrival speed (triangle pattern) (m/s)} \quad a: \text{Directive deceleration (m/s}^2\text{)}$$

[RCS3-RA15R/RA20R only]

- Calculate the average speed. The average speed can be found with the following equation.

$$v_t = \frac{0.5 \cdot v_1 \cdot t_{1a} + v_1 \cdot t_{1f} + 0.5 \cdot v_1 \cdot t_{1d} + 0.5 \cdot v_2 \cdot t_{2a} + v_2 \cdot t_{2f} + 0.5 \cdot v_2 \cdot t_{2d}}{t}$$

v_1 : Constant speed when approaching

v_2 : Constant speed when returning (trapezoid pattern) or Arrival speed (triangle pattern)

Next, calculate the final continuous operational thrust from the calculated continuous operational thrust F_t and average speed v_t .

$$F = F_t + v_t \cdot K$$

Select coefficient K from the table below.

Model	Coefficient K
RA15R	150
RA20R	412.5

Confirm that the calculated continuous operational thrust F_t (F calculated by the above formula for RA15R and 20R) is smaller than the allowable continuous operational thrust. The allowable continuous operational thrust force of this product is as follows.

Model	Allowable continuous operational thrust force [N]
RA6R-LCT	420
RA7R-LCT	600
RA8R-LCT	1000
RA10R-LCT	2100
RA13R-LCT/LCN (*)	Lead 2.5: 5100
	Lead 1.25: 10200
RA15R-LCT	13500
RA20R-LCT	22500

(*) For RA13R, please limit the duty cycle to 50% or less.

If the conditions cannot be satisfied, please adopt measures such as shortening the push time or extending the wait time.

Operating Conditions

RCS3/RCS2 Series Conveyor position models (without load cell)

RCS2

RA13R The same conditions as the servo press compatible rod type with load cell.
Please refer to P.27~30.

RCS3

When using the actuator, the following two conditions must be satisfied.

Condition 1. The push time must be **the determined time or less**

Condition 2. The operating duty must not exceed the allowable duty according to the operating conditions (payload and speed)

Condition 3. In a single cycle, push-motion operation must occur only once

Selection method

Condition 1. Push time

The maximum push time of each push command value is determined in the tables below. When using the actuator, please make sure that the push time is the time indicated in the tables below or less.

Please be aware that using the actuator beyond the time indicated in the tables below may cause the actuator to malfunction.

RA15R

Push Command Value (%)	Maximum Push Time (s)
90 or less	Continuous pushing available
91~100	300
110	118
120	58
130	40
140	30
150	25

Condition 2. Duty

Duty cycle is the percentage of the actuator's active operation time in each cycle. The duty cycle varies depending on the operation conditions (payload and speed). According to the combination of the maximum speed and payload within one cycle, check the guidelines for the allowable duty cycle with the graph below and operate at or below the allowable value.

<Example>

If the speed and payload change during reciprocating motion, check using the larger value.

	Forward	Return
Speed	Low	High
Payload	High	Low

Using this combination of values, check with the following graph.

[Duty Cycle]

Duty cycle is the percentage of the actuator's active operation time in each cycle.

$$D = \frac{T_M}{T_M + T_R} \times 100(\%)$$

D: Duty
T_M: Operating time
(including push-motion operation)
T_R: Stopping time

**RCS3****RA15R****[Vertical mount]****[Horizontal mount]**

* The above graph is the case with two external regenerative resistors installed. The number of regenerative resistance units (RESU-35T) can be reduced according to the payload, speed and duty. Contact our sales personnel for details.

RA20R**[Vertical mount]****[Horizontal mount]**

* The above graph is the case with two external regenerative resistors installed. The number of regenerative resistance units (RESU-35T) can be reduced according to the payload, speed and duty. Contact our sales personnel for details.

Moment Selection Guide

RCS3/RCS2 Series Conveyor position models (without load cell)

RCS2

RA13R

Loads can be applied to the rod within the range of the conditions determined by the following formula.

Loads can be applied to the rod of RCS2-RA13R (without load cell) within the range of the conditions determined by the following formula.

$$M+T \leq 120(\text{N}\cdot\text{m})$$

$$\text{Load moment } M = Wg \times L_2$$

$$\text{Load torque } T = Wg \times L_1$$

- * g = Gravitational acceleration 9.8
- * L_1 = Distance from the rod center to the center of gravity of the workpiece
- * L_2 = Distance from the actuator mounting surface to the center of gravity of the workpiece + 0.07

If the above conditions are not satisfied, use an external guide, etc., to make sure that no load is applied to the rod.

RCS3

RCS3-RA15R/RA20R: Loads can be applied to the rod within the range of the following two conditions.

Condition 1. The radial load acting must not exceed the maximum allowable radial load

Condition 2. The applied moment must satisfy the following formula

$$M \geq Ma + Mb + K \cdot Mc$$

- M : Allowable moment (see table below)
- Ma, Mb, Mc : Load moment (see figure at right)
- K : Uniform coefficient
- RCS3-RA15R: 0.36
- RCS3-RA20R: 0.37

■ RCS3-RA15R

Stroke (mm)	100	200	300	400	500
Maximum allowable radial load (N)	392				
Allowable moment (Nm)	140	135	130	125	120

■ RCS3-RA20R

Notes When Installing

When installing the front bracket or flange (optional), please be careful that no external force acts on the actuator. (External force may cause malfunctions or damage to parts.)

Please install a support block when front mounting or back mounting a horizontally mounted actuator that is 150st or more. However, adding a support block even for less than 150st is recommended, since vibration might occur depending on the operational and installation conditions and damage the actuator.

RCS3/2-RAR Series Options

Brake

Option Code **B/BN** (without brake box)

Description When the actuator is mounted vertically, this works as a holding mechanism that prevents the slider from falling and damaging any attachments when the power or servo is turned off.

Cable Exit Direction

Option Code **CJT / CJR / CJL / CJB / CJO**

Description This option allows you to change the exit direction of the motor-encoder cable to top, bottom, left, or right.

Flange (Front)

Option Code **FL**

Description A bracket that attaches to the actuator body with bolts.

With Load Cell

Option Code LCT / LCN

Description This is an option for installing a load cell on the rod tip of RCS3 Series and RCS2-RA13R (ultra-high thrust actuator) for servo press, and operating with force control. When using as a servo press, be sure to specify. LCT is equipped with a cable track for load cell wiring, while the LCN specification has no cable track and is to be wired by the customer. (LCN is dedicated for RCS2-RA13R.)

Caution

When operating RCS2-RA13R with force control, only the SCON-CB controller can be used.

Note:

If a Load Cell Calibration Certificate is required by the load cell vendor, there is an extra charge and it must be ordered on the same PO as the actuator. Ordering the certificate after purchasing the actuator will require sending the load cell back to IAI.

Side-mounted Motor Direction

Option Code ML / MR / MT

Description This allows you to specify the direction of the side-mounted motor type. As viewed from the motor side of the actuator, side-mounting to left is ML, right is MR, and top is MT.

Side-mounted Motor Direction / Cable Exit Position

Option Code MT□ / MR□ / ML□

Description The combination of side-mounted motor direction and cable exit direction can be specified.

Notes

Be sure to select a symbol in the model number for the side-mounted motor direction and cable exit position.

Option Code	MT1	MT2	MT3	MR1	ML1	MR2	ML3
Side-mounted motor direction	Top (standard)	Top	Top	Right side	Left side	Right side	Left side
Cable Exit Position	Top (standard)	Right side	Left side	Top	Top	Right side	Left side

SCON-CGB

Position Controller for RCS3-RA15R/RA20R without Load Cell

Features

1 Supports battery-less absolute encoder

The RCS3 can operate equipped with a battery-less absolute encoder. Since no battery is needed for retaining position data, it is possible to save space around the control panel, which helps to keep down the initial cost and maintenance cost.

2 Compatible with major field networks <Optional function>

Can be directly connected to DeviceNet, CC-Link, and PROFIBUS-DP, as well as CompoNet, EtherCAT, EtherNet/IP and PROFINET IO. It can also be operated by specifying the coordinate values directly via the field network.

DeviceNet™

CompoNet™

EtherNet/IP™

PROFI
BUS

CC-Link

EtherCAT®

PROFI
NET

3 Vibration suppression control function <Standard function>

Equipped with a damping control function that reduces the shaking (vibration) of the workpiece attached to the slider of the actuator. The standby time for vibration to settle is shortened, making it possible to shorten the cycle time.

There is vibration after stopping.

There is almost no vibration after stopping.

4 Predictive maintenance function <Standard function>

- A function that issues a warning when a motor overload is detected has been included. Monitoring changes in the temperature of the motor makes it possible to detect abnormalities before the occurrence of a breakdown or a malfunction.
- Monitoring functions have been improved. Similar to an oscilloscope, it is now possible to acquire the waveforms of the position, speed, etc. from the instant the state of the selected signal changes. It is also possible to acquire the signal states of positioning complete, alarms, etc.
- A function that integrates the number of cycles with the traveled distance accumulation makes it possible to check maintenance timing.
- The calendar function makes it possible to keep a timetable of the alarms that have been generated.

<Maintenance information>

Model

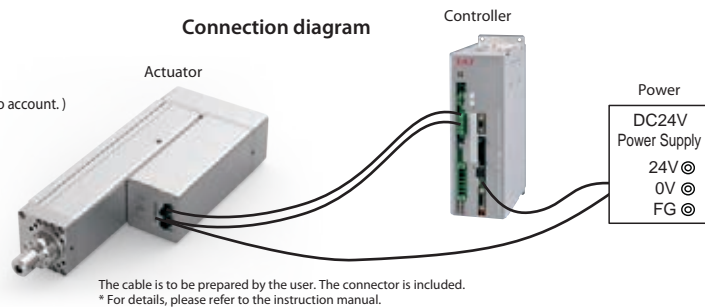

System Configuration

RCS3-RA15R/20R (with brake) wiring

The brake circuit of RCS3-RA15R/20R is built into the actuator.
Input a 24VDC $\pm 10\%$ voltage to the actuator.
(If the input voltage is low, the brake cannot be released.
Be sure to use a power supply with the voltage drop in wiring taken into account.)
24VDC must be supplied to both the actuator and controller.

Pulse Converter: Model JM-08

Converts differential pulses to the open-collector specification.
Please use this converter if the host controller uses open-collector specification for pulse input.

Specifications

Item	Specification
Input power	24VDC $\pm 10\%$ (Max. 50mA)
Input pulse	Differential input (Max. 10mA) (RS422 compliant)
Input frequency	500kHz or less
Output pulse	24VDC open collector (collector current Max. 25mA)
Mass	10g or less (not including the cable connectors)
Accessories	37104-3122-000FL manufactured by 3M (e-CON connector) x 2 Applicable wire AWG No.24~26

Operation Mode

In the positioner mode, the unit can be operated with the position data (travel position, speed, acceleration, etc.) input to the controller from an external source using I/O (input/output signal). In this mode, six operation modes can be selected according to the parameters.

	Mode	Type	Number of positioning points	Features
Positioner mode	Positioning mode	PIO Pattern 0	64 points	This is the factory default standard mode. The number of the target position is externally specified.
	Teaching mode	PIO Pattern 1	64 points	In this mode, the slider (rod) is moved with an external signal and its stop position can be registered as position data.
	256-point mode	PIO Pattern 2	256 points	This is a mode which increases the number of points in the positioning mode to 256.
	512-point mode	PIO Pattern 3	512 points	This is a mode which increases the number of points in the positioning mode to 512.
	Solenoid valve mode 1	PIO Pattern 4	7 points	In this mode, travel is possible by using just the ON/OFF signal, similar to the solenoid valve of the air cylinder.
	Solenoid valve mode 2	PIO Pattern 5	3 points	In this solenoid valve mode, the output signal is the same as the auto switch for air cylinders.

I/O Signal Table * The I/O signal assignment can be selected from 6 types.

Field Network Specification: Explanation of Operation Modes

If controlling via a field network, you can select one of the following nine modes to operate the actuator. Please note that the data areas required on the PLC side will vary depending on the mode.

■ Mode Description

	Mode	Description
0	Remote I/O mode	Similar to the PIO specification, this mode operates by directing bytes the ON/OFF signal via a network. The number of positioning points and functions will vary depending on the operation patterns (PIO patterns) set by the controller's parameters.
1	Position/simple direct value mode	The target position value is directly input, while all other operational conditions (speed, acceleration, etc.) are set by indicating the position number corresponding to the desired operating conditions from the position data table.
2	Half direct value mode	The actuator is operated by directly inputting values for speed, acceleration/deceleration rate and push current, as well as the target position.
3	Full direct value mode	The actuator is operated by directly inputting values for the target position, speed, acceleration/deceleration rate and push current limit value, etc. In addition, you are able to read the current position, current speed, and the command current value, etc.
4	Remote I/O mode 2	This mode is the same as the remote I/O mode above, with the added functionality of reading current position and the command current value.
5	Position/simple direct value mode 2	This mode is equipped with force control function instead of the teaching and zone functions of the position/simple direct value mode described above.
6	Half direct value mode 2	This mode is able to read the load cell data instead of reading the command current, a function of the half direct value mode above, and also supports the force control function.
7	Remote I/O mode 3	This mode is the same as the remote I/O mode above, with the added functionality of reading current position and load cell data.
8	Half direct value mode 3	This mode supports the vibration control function instead of the jog function of the half direct value mode described above.

■ Required Data Size for Each Network

	Mode	DeviceNet	CompoNet	CC-Link	—	PROFIBUS-DP	EtherCAT	EtherNet/IP	PROFINET IO
0	Remote I/O mode	2 bytes	2 bytes	1 station	—	2 bytes	2 bytes	2 bytes	2 bytes

I/O Wiring Diagram

Positioning Mode / Teaching Mode / Solenoid Valve Mode

PIO connector (NPN specification)

* Connect pin numbers 1A and 2A to 24V, and connect pin numbers 19B and 20B to 0V.

PIO Input/Output Interface

Input External input specification

Item	Specification
Input voltage	24VDC $\pm 10\%$
Input current	4mA/circuit
ON/OFF voltage	ON voltage: Min. 18.0VDC OFF voltage Max. 6.0VDC
Isolation method	Photocoupler

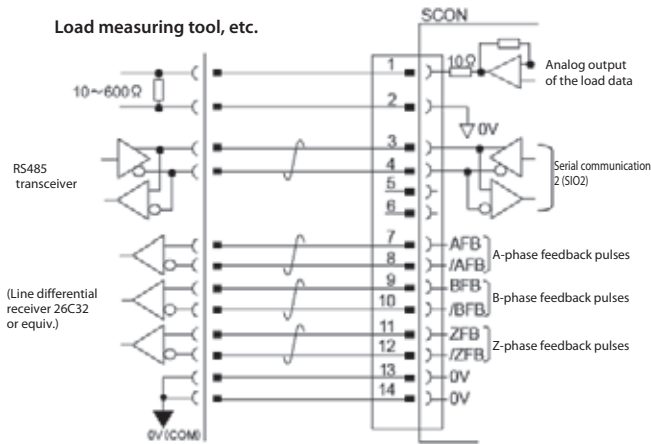

Output External output specification

Item	Specification
Load voltage	24VDC $\pm 10\%$
Maximum load current	50mA/point
Leakage current	Max. 0.1mA/point
Isolation method	Photocoupler

Multi-function Connector (Interface)

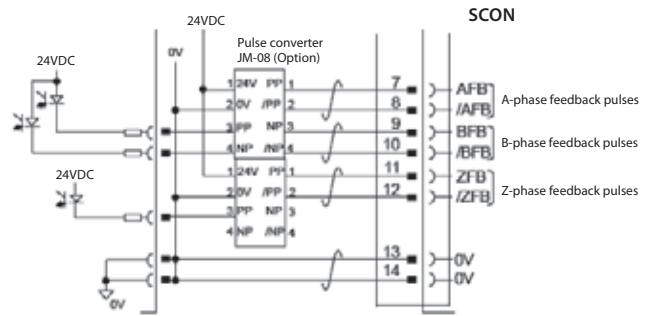

(1) When the host controller inputs feedback pulses with a line differential receiver.

(2) When the host controller inputs feedback pulses with an open collector

Requires a pulse converter (JM-08: optional *).

* Please see P.40 for more information

Specifications Table

Item			Specification
Compatible motor capacity			3000W-3300W
Connecting actuators			RCS3 Series actuator
Number of controlled axes			1-axis
Method of operation			Positioner type
Backup memory			Non-volatile memory (FRAM)
I/O connector			40-pin connector
Number of I/O points			Input 16 points / output 16 points
I/O power			External supply 24VDC ±10%
Brake power			External supply 24VDC ±10% (Max. 0.1A) * Max. 1.5 A must be separately supplied for RCS3-RA15R/RA20R as well
Serial communication			RS485 2ch
Position detection method			Battery-less absolute encoder
Drive-source cutoff function			No built-in relay
Electromagnetic brake force release			External brake release switch ON/OFF
Input power			Three-phase 200~230VAC ±10%
Power capacity			3000W/5705VA 3300W/6062VA
SCON- CB/CGB	External interface	PID specification	Dedicated 24VDC signal inputs/outputs (NPN/PNP selectable) --- Max. of 16 input/16 output points
		Fieldbus specification	DeviceNet, CC-Link, PROFIBUS-DP, CompoNet, EtherCAT, EtherNet/IP, PROFINET IO
	Data retention memory		Position data and parameters are saved in non-volatile memory. (Unlimited rewrites)
Vibration resistant			X, Y and Z directions 10~57Hz Single-side width 0.035mm (continuous), 0.075mm (intermittent) 58~150Hz 4.9m/s² (continuous), 9.8m/s² (intermittent)
Calendar/clock functionality	Retention time		Approx. 10 days
	Charging time		Approx. 100 hours
Protection functionality			Overcurrent, abnormal temperature, fan speed degradation monitoring, encoder disconnection, etc.
Internal regenerative resistance value			34Ω 160W
Ambient operating temperature			0 to 40°C
Ambient operating humidity			85% or less (Non-condensing)
Operating ambience			Free from corrosive gases
Ingress protection			IP20
Mass			About 2.8kg
External dimensions			92.7mm(W)×300mm(H)×172mm(D)

External Dimensions

For 3000W/3300W

Name of Each Component

[For 3000W/3300W]

1 FG connection terminal

A terminal for connecting the ground line to prevent electric shock and noise. It is connected to the PE power supply connector inside the controller.

2 Power supply connector (PWR)

A connector used to connect to the AC power supply. Provides power both to the controller and the actuator.

3 System I/O connector (SYS I/O)

A connector used to connect switches such as emergency stop switch.

4 Axis number setting switch (ADRS)

A switch for setting the axis number when operating multiple axes by serial communication. When using the SIO converter, it is possible to control multiple axes without attaching/detaching the connector of the communication cable from teaching tools such as PCs, etc.

5 Piano switch

Not used.

6 Motor connector (MOT)

A connector for the actuator motor cable.

7 Regenerative resistance unit cable connector (RB)

A connector for the external regenerative resistance unit.

8 Charge status display LED

This displays the charge status inside the controller.
Caution: While this LED is lit, do not touch the controller or regenerative resistance unit in order to prevent electric shock.

9 Internal regenerative resistance effective connector

A short-circuit cable is connected at shipping.
Caution: Be sure to use with the short circuit cable attached.
Use without the cable will damage the equipment.

10 LED display (PWR, SV, ALM, EMG)

This represents the operation status of the controller.
○: ON —: OFF △: Undefined (ON or OFF)

LED				Operating status
PWR (green)	SV (green)	ALM (orange)	EMG (red)	
—	—	—	—	Control power OFF
○	—	—	—	Controller starts up normally
○	—	—	—	Servo OFF
○	○ (Note)	—	—	Servo ON
○	—	○	△	Alarm
○	—	△	○	Emergency stop
○	△	△	△	Warning

(Note) Blinks when automatic servo is OFF

11 Multi-function connector (MF I/F)

A connector to output the feedback pulses and analog load data of the load cell, and to use the SIO communication function (SIO2).

12 PIO connector (PIO)

A connector for control input/output signal connection. (Note) It is not installed for the fieldbus specification.

13 Operation mode setting switch (MANU/AUTO)

An interlocking switch for preventing duplication of movement commands from PIO (PLC) and commands from teaching tools such as PCs, etc.

14 SIO connector (SIO)

A connector used to connect teaching pendants or communication cables to the PC.

15 Brake release switch (BK RLS / NOM)

A switch to be used to release the brake of the actuator with brake forcibly.
Warning: Be sure to set this switch to the NOM side in normal operation. If it is left on the RLS side, the brake will not be applied even if the servo is turned OFF. If it is vertically mounted, the workpiece may fall, risking injury or damage to the workpiece.

16 Brake power supply connector (BK PWR)

A connector for supplying power (24VDC) to release the brake when using an actuator with brake.

17 Encoder connector (PG)

A connector for the actuator encoder cable.

18 Connector for the absolute data backup battery

A battery cable connector used for the absolute specification.

Options

Touch panel teaching pendant

■ **Features** A teaching device equipped with functions such as position teaching, trial operation, and monitoring.

■ **Model** **TB-02-**☐

■ **Configuration**

Specifications

Rated voltage	24V DC
Power consumption	3.6W or less (150mA or less)
Ambient operating temperature	0 to 40°C
Ambient operating humidity	20~85% RH (Non-condensing)
Environmental resistance	IP20
Mass	470g (TB-02 unit only)

PC software (Windows only)

■ **Features** The start-up support software which comes equipped with functions such as position teaching, trial operation, and monitoring. A complete range of functions needed for making adjustments contributes to shortened start-up time.

■ **Model** **RCM-101-MW** (with an external device communication cable + RS232 conversion unit)

Compatible with Ver. 10.02.01.00 or later

■ **Configuration**

XP SP2 or later / Vista / 7 / 8 / 10

■ **Model** **RCM-101-USB** (with an external device communication cable + USB conversion adapter + USB cable)

Compatible with Ver. 10.02.01.00 or later

■ **Configuration**

Regenerative resistance unit

■ **Features** Unit that converts the regenerative current generated during motor deceleration into heat.

<For 3000W/3300W>

■ **Model** **RESU-35T**

Specifications

Unit weight	About 1.8kg
Built-in regenerative resistance value	30Ω 450W
Unit mounting method	Screw mount

Note: The cable is to be prepared by the user.

Necessary Amount Guideline

● 3000W, 3300W

Number of connected units
2

* Please check the allowable conditions in "Operating Conditions" on P.31~32.

* The number of regenerative resistances can be reduced according to the payload, speed and duty. Please contact IAI for details.

Dummy plug

■ **Features** This is required when the safety category specification (SCON-CGB) is used.

■ **Model** **DP-5**

Maintenance Parts

When placing an order for a replacement cable, please use the model name shown below.
